

DIJKSTRA(random_list_of_strings)

Creates a copy of random_list_of_strings that has been sorted alphabetically
and store it in variable sorted_list
`sorted_list = sorted(random_list_of_strings[:])`

Loop through all the items in sorted_list
`for item in sorted_list`

Check to see if there is 'blue' in sorted_list
if `item == 'blue' in sorted_list:`

Function to remove the blue item
`sorted_list.remove(item)`

Function to add the blue item to the front of the list
`sorted_list.insert(0, item)`

False

Function to clear all the content of random_list_of_strings
`random_list_of_strings.clear()`

Function to add all the contents of sorted_list into random_list_of_strings
`random_list_of_strings.extend(sorted_list)`
